

PFIZER

Resin Flooring / Screed

Larsen Contracts recently undertook refurbishment of Resin flooring at the Pfizer manufacturing facility in Dublin. Pfizer is a world leader in the pharmaceutical sector and has a requirement for easily cleaned flooring which is also aesthetically pleasing

The application chosen was Flowcrete Peron STC with decorative flake. This is a seamless epoxy resin system that offers excellent resistance to chemical compounds and is ideal for clean rooms, processing lines and R&D laboratories. Combined with added chemical and electrostatic resistance, this seamless surface is well suited to sterile processing environments. The high gloss, joint-free finish of this floor coating eliminates the cracks and crevices that harbour dirt and dust – making the floors dust-free as well as being easy to clean and decontaminate.

Flowcrete Peron STC also delivers a number of tangible environmental benefits when compared to other Resin flooring systems of its kind. Not only is it virtually odourless, but its solvent and Nonylphenol-free formulation ensures that no harmful volatile organic compounds (VOC's) are released to atmosphere during application to meet high air quality standards.

The upgrade works to 650m² of flooring were completed during a five day shutdown period. Larsen Contracts have worked for Pfizer for a number of years in flooring upgrade works

Hygienic pharmaceutical flooring

Project Details:

Client: Pfizer , Grange Castle ,Dublin

Main Contractor: H A O Neill

Sub-Contractor: Larsen Contracts

Application: Flowcrete Peron STC
Decorative Flake 2mm Epoxy Screed

Supplier: Flow Crete

Sector: Pharmaceutical Industry
